### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or fairly suggest forming a bi-component melt-blown fiber by directing the polymer streams such that they contact and bond outside the die. While such is known in spunbond fibers, there is no suggestion in the art to join the polymers together outside the die in melt-blowing where the combined polymer stream is contacted by gas jets positioned adjacent the spinneret orifices. In regards to applicant's assertion that the claims require the polymer streams to be planar after exiting the filter, the claims do not require such. Additionally, while the specification indicates the filtered planar polymer streams are spun through a plurality of exit orifices, the specification never clearly states the streams are planar after exiting the die. Rather the filtered planar polymer stream appears from a reading of the specification to mean the polymer stream after having passed through the majority of the filter. As shown in Figure 1, passages 13 and 14, described as separate polymer flow paths directly contact the filter, indicating the polymer stream is not planar after it exits the filter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
